A delegation from Roeselare visited the Bois de Boulogne to discover innovative water management solutions

Published on 17 February 2026

Representatives from the sanitation department of the city of Roeselare, the Flemish environmental agency, and the drinking water utility (Watergroep) traveled to Paris to meet with representatives of the Parisian sanitation department and made a detour to the Bois de Boulogne to visit the site.

Their approach is part of a comprehensive strategy aimed at restoring the role of water in the city while protecting the population from flooding. The delegation also faces significant challenges regarding water quality. In this context, the Life Adsorb project was presented to them as a potential solution for improving water quality.

This visit thus provided valuable insights into this technology.
