Layman's report

The Layman report's a document that aims to explain scientific or technical work in a clear and accessible way, using simple words that can be understood by people who are not specialists in the subject.

Its main purpose is to make science accessible by presenting objectives, methods, and results without complex jargon, to inform non-expert audiences such as citizens, patients, policymakers, funders, or journalists, and to ensure transparency by showing how public or private funds are being used.
