

PROJECT LIFE ADSORB

Timeline

With an initial duration of 5 years (July 2018 - July 2023), the project has been extended to September 2025.

The Life Adsorb project was selected as part of the European Commission's LIFE program for the environment and climate. It brings together the City of Paris and a multidisciplinary team composed of public academic partners (ENPC, INRA, UPEC, AgroParisTech), and operational partners (Cerema) and the Ecobird design office.

It was initially planned that its implementation would be spread over five years from June 2018 to June 2023. Due to health conditions related to COVID 19, a significant delay in the delivery of the prototype was recorded. The extension request made to the European Commission was accepted and the project will close in September 2025
